

Why Tixel vs. Traditional Lasers?

No needles. No bleeding. No radiation.
Just precisely controlled heat that works with your skin's own renewal process.

	tixel	Traditional Lasers
Summer safety	No light energy, so no added sun sensitivity	Often avoided in summer months
Downtime	Typically 0–2 days	Often several days to a week+
Comfort	Low pain; little to no anesthesia	Often requires numbing or anesthesia
Skin types	Suitable for all skin types	Higher risk for darker skin types
How it works	Gentle Thermo-Mechanical Action® (heat)	Light / laser energy

A modern, minimally invasive alternative built around patient comfort and rapid recovery.

JILL BLACKER, TIXEL PATIENT
AT KIAMA SKIN BOUTIQUE

"I honestly didn't think it was possible to look like 'me' again. Tixel was different - it felt like the treatment was working with my skin instead of against it. To see that pigment clear and the volume come back has been life-changing."

Advanced Aesthetic Solutions

Advanced Skin Rejuvenation

A breakthrough in fractional skin rejuvenation for the face, eyes, neck and body

- ✓ Suitable for all skin tones & types
- ✓ Effective year-round, in any climate
- ✓ Minimal downtime

How Tixel Works

Unlike traditional lasers that use light energy, Tixel is powered by proprietary Thermo-Mechanical Action® (TMA) - precisely controlled heat delivered precisely controlled heat delivered fractionally via brief contact with the skin.

- 01 Thermal Energy**
A sterile, patented titanium tip is heated to a precisely controlled temperature.
- 02 Brief Contact**
The handpiece briefly touches the treatment area, delivering fractionated heat to the skin.
- 03 Natural Renewal**
This targeted heat triggers the skin's natural healing process, leaving it smoother, tighter, and younger-looking.
- 04 Targeted Delivery**
Temporary micro-channels are created to dramatically enhance the absorption of post-procedure topicals.

Why physicians choose Tixel:

- ✓ FDA-cleared technology
- ✓ Impressive, repeatable results
- ✓ Versatile options across multiple applications
- ✓ Proprietary Thermo-Mechanical Action® (TMA)

Tixel Treatment Area Options

Face & Eyes

Forehead & frown lines, eyelid hooding, eye bags, crow's feet, and lip lines.

Texture

Acne scars, active acne, enlarged pores, and creased chins.

Neck & Body

Neck lines, décolleté (chest), arms, hands, and stretch marks.

What to expect

THE PLAN

Most patients receive 3–4 sessions, typically spaced 4–6 weeks apart.

POST-TREATMENT

A warm sensation and mild redness like a light sunburn for a few hours. Any micro-crusting usually clears within about 3 days.

Reveal healthier, younger-looking skin.

Ask your provider if Tixel is right for you, and **book your consultation.**
