

Testimonials

"I really enjoy the TV glasses at plays and my grandkid's events. They are wonderful."

"WITHOUT THESE TELESCOPIC GLASSES, I COULD HAVE NEVER TAKEN CARE OF MY WIFE," PATIENT CARL LEE EXPLAINS.

"With these glasses I am able to read my favorite books again."

Beyond Low Vision: A Message from the Doctor Dr. John P. Jacobi, OD, FOVDR, FIALVS

From the first time I heard a patient with macular degeneration share with me that every other practitioner told him that, "There is nothing else I can do for you," I strove to prove that statement a myth. As I delved into helping patients with low vision, I have been able to debunk those statements.

There is life Beyond Low Vision!

I have been providing family vision care for 36 years. During that time, I have provided low vision services to thousands of patients. I have been able to help countless patients restore driving privileges, regain their reading abilities, pursue their hobbies, and even enjoy the ability to work again! With the hope of the patient, there is very little, as a team we can't accomplish!

At this point in my career, I specialize in helping low vision patients improve the quality of their lives by providing low vision glasses and devices. There are very few doctors providing low vision services. However, I truly enjoy helping patients with the challenges that come with low vision.

My philosophy is to prescribe practical solutions to visually compromised patients. You already know how to use hand magnifiers (like Sherlock Holmes). I prescribe "hands free" options to assist you with your lifestyle challenges. As a result, my patients feel more independent and hopeful when they leave my office.

How We Help People Who Have Low Vision

Spectacle miniature telescopes

Designed for tasks requiring better central vision and mobility, These glasses are used by drivers to see signs and traffic lights, by grandparents to see children playing soccer, and bridge players to see cards on the table.

Task specific training and therapy

the doctor will train you to maximize vision with the use of prescribed devices, and utilize healthy remaining vision to perform desired tasks. This increases confidence, safety, and independence.

E-Scoop™ Contrast Enhancing Glasses

These lenses combine 5 special optical elements that create a larger, clearer, higher contrast image. One patient improved his golf score dramatically wearing them. Another exclaimed, “this is the clearest I have seen in years.” They must be seen to be believed.

Spectacle microscope glasses

Two high-powered lenses “piggybacked” for crystal clear images are prescribed for reading small print.

Spectacle Prismatic Glasses

These moderate powered lenses are useful for near tasks like reading, writing, and handicrafts.

Nutritional Counseling

Twelve years after the landmark AREDS 1 (Age Related Eye Disease Study 1), exceptional advances in scientific knowledge allow us to recommend nutritional supplements proven to support macular health.

Illumination Counseling

The aging retina of the eye requires increased illumination to achieve better vision. We will recommend low vision designed lamps and bulbs for best results at home.

Driving Rehabilitation

Loss of independence is the single most devastating result of vision loss. To pass DMV vision requirements, the better eye must test better than 20/200.

We can test your vision for DMV and facilitate services to assist you in driving.
